The Inventor's Desk

On A big and black desk, there lay all sorts of mechanical ~~motionery~~ ^{parts,} machinery and tools: Twenty-five bolts and screws, ~~a hammer and a drill and sharp and smooth ruler, a saw and drill and sharp and smooth~~ a drill and sharp and smooth metal pieces. An engineer ^{was} ~~is~~ trying to invent something ^{extraordinary} and amazing. Today ~~was the day,~~ he set to work. He prepared some electronics and got to work. He drilled holes into the metal pieces and after, ~~he melted~~ them to make them round. He turned one square piece into a giant sphere. He turned ^{four more pieces} a rectangle into a ~~cuboid~~ cuboid. He made ~~to~~ four more thin cuboids and small spheres. Suddenly, his idea began to take shape. The small electronics

he had ^{were} was put on the giant ^{sphere} sphere
~~and all the~~
and all the extra ~~metal~~ pieces were put on
the ~~&~~ small spheres. The four thin cuboids
were attached to the bottom and sides of
the bigger ~~one~~, the sphere, with electronics on
top and the small spheres with the extra
pieces on the cuboids. He had made his
spectacular invention at last. Nevertheless, though it
wasn't good looking, the invention he made was
going to be used in his daily life.

The robot that was created would be ~~a~~ a
good ~~friend~~ friend ~~he~~ never had.
